

**Project Design Phase-I**  
**Solution Architecture**

<b>Date</b>	19 October 2022
<b>Team ID</b>	PNT2022TMID28938
<b>Project Name</b>	Visualizing and Predicting Heart Diseases with an Interactive Dash Board

**Solution Architecture:**

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

**Example - Solution Architecture Diagram:**
